

## **Modulmix: fast, modular and customisable**

Modulmix, the new automatic A-Silicone mixer with a 5:1 mixing ratio, is the result of advanced Zhermack research to guarantee high performance, maximised quality and functionality.

Special Modulmix features include:

**double supply speed** - helps professionals save precious time by mixing all Zhermack impression materials (including putty viscosity), modulating the best supply speed with the simple touch of a button.

**modularity** - The patented modular Modulmix design has been studied especially for dental studios requiring the use of more than one impression material at the same time (wall-mounting available upon request).

### **simple to use**

- new 5:1 ratio cartridges show the name of the material, working/setting times on their labels
- cartridge replacement in just 3 seconds
- new dynamic-static mixing tips guarantee perfect mixing without overheating material and reducing waste to 20%\*
- optimised design for right and left-handed operators

**high mixing quality for all viscosities and systems** - MODULMIX offers uniform, bubble-free mixing on all 5:1 ratio Zhermack products (heavy body, Monophase and putty) and is compatible with all 5:1 ratio systems found on the market.

**customisation** – its customisable lateral sills (six different colours) allow MODULMIX to integrate into all types of working environment and decor.
